PROFESSIONAL SUMMARY

B.Tech student with hands-on expertise in full-stack web development, machine learning, geospatial AI, and AI-powered chatbot development. Proven ability to independently architect, develop, and deploy end-to-end applications — from satellite-driven ML pipelines to production AI integrations built in a professional internship setting. Seeking opportunities in Software Development, AI/ML, and Data Science.

EXPERIENCE

Software Developer Intern — Dixon Technologies	19 Jun 2026 – 31 Jul 2026
<i>Project: AI-Powered Employee Assistant Bot for Microsoft Teams</i>	
- Designed and developed an AI-powered employee assistant bot for Microsoft Teams that streamlines employee interactions by providing intelligent assistance, answering queries, and retrieving information from the employee database. - Built the bot using Node.js/Express and the Azure Bot Framework, with MongoDB Atlas for data storage, wink-nlp for intent detection, and Google Gemini as an AI fallback layer for natural-language queries. - Deployed the bot on Azure App Service with CI/CD via GitHub Actions, and produced technical documentation covering system architecture and features for stakeholder review.	

EDUCATION

B.Tech — University School of Automation and Robotics (GGSIPU), Delhi	Expected 2028
Senior Secondary (Class XII) — CBSE, R.P.V.V, Delhi	2024
Secondary (Class X) — CBSE, R.P.V.V, Delhi	2022

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML5, CSS3
Machine Learning & Geospatial AI: XGBoost, SHAP, DBSCAN, Scikit-learn, Geospatial Data Analysis, Satellite Data Processing (Sentinel-5P, NASA VIIRS)
Web Development: React.js, Node.js, Express.js, Flutter, REST APIs, Azure Bot Framework, MongoDB, TailwindCSS
Data Science & Viz: NumPy, Pandas, Matplotlib, Seaborn, Plotly, Dash
Tools & Platforms: Git, GitHub, GitHub Actions (CI/CD), VS Code, Vercel, Render, Azure
Core Concepts: Data Structures & Algorithms, OOP, Problem Solving

PROJECTS

VayuShetra — Satellite-Driven Hyperlocal AQI & Biomass Intelligence Platform	XGBoost · SHAP · Sentinel-5P · NASA VIIRS · Python
- Built an end-to-end, physics-constrained geospatial intelligence platform harmonizing Sentinel-5P trace-gas columns, NASA VIIRS fire radiative power (FRP), and ECMWF boundary-layer meteorology into an XGBoost inversion engine ($R^2 = 0.89$) to compute hyperlocal ground-level AQI across a continuous 706-cell spatial grid ($0.25^\circ \times 0.25^\circ$) with zero physical ground sensors. - Engineered 48-hour forward smoke transit corridor projections using Lagrangian kinematic advection and Briggs plume-rise physics, with SHAP-based explainability for model interpretability.	
Guard Attendance Management System	Flutter · React (Vite) · TailwindCSS
- Built a production-grade workforce attendance system for security guard agencies: a Flutter Field Officer app enforcing live GPS geo-fencing (server-side Haversine formula) and mandatory rear-camera photo proofs, paired with a React + Vite + TailwindCSS manager dashboard. - Implemented real-time dashboard features including live guard status counters, geo-fence violation alerts, an interactive geocoded location picker, bulk Excel roster import/validation for 100+ guards, and immutable audit logging of all manager actions.	
Tech Layoffs Analytics Dashboard	Python · Dash · Plotly Express · Pandas
Built an interactive analytics dashboard visualizing global tech layoff trends across 1,000+ companies with dynamic year filtering, KPI metric cards, time-series charts, and a polished dark-theme glassmorphism UI.	

ACHIEVEMENTS & ACTIVITIES

- Ranked in the Top 50 among 1,500+ participants at the Brainwave Hackathon.
- Maintained a strong academic record: Class X (88%) and Class XII (91%, CBSE).
- Continuously expanded technical skills through self-directed learning of machine learning, geospatial data science, React.js, Node.js, and the Azure Bot Framework.
